

CYBER SAFE

An App designed to assist your Clients with possibly the “MOST LIKELY” Risk they face - Cyber attacks

Australian companies facing tougher privacy laws have been warned employee actions account for two-thirds of cyber breaches worldwide.

The stark reality is that cybercriminals are having massive success, affecting companies and economies worldwide.

This is predominantly due to people clicking on links and opening malicious email attachments, visiting websites they shouldn't be, downloading dodgy software and using the same password across multiple accounts, all of which results in data breaches and stolen identities. If employees were more aware of the dangers, they could easily become the most powerful defense a company has.

Typical SME's don't have resources to implement Cyber Awareness training programs for their general staff

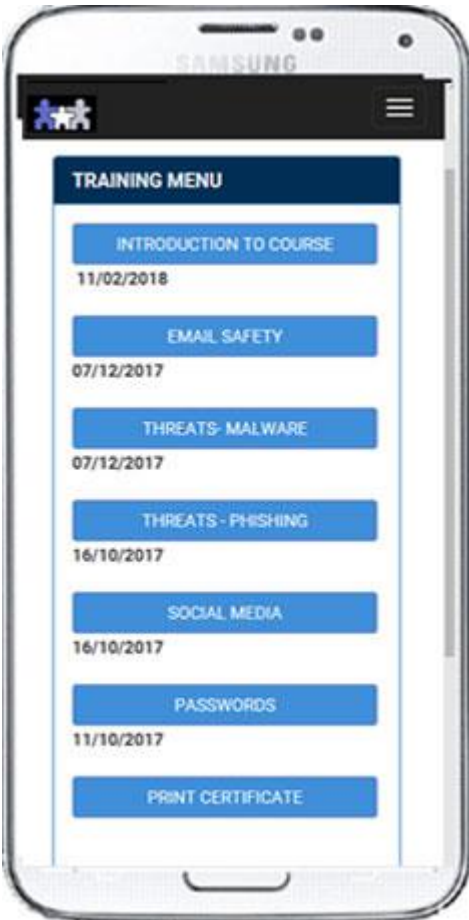

Our Solutions to this problem is a two part program

1. Cyber Risk Awareness training for SME general staff
2. Email risk alerts of new threats'

BUSINESS RISK MANAGEMENT SERVICES

Building Risk Management Apps for the Insurance Industry

Business Risk Management Services, developers of the training program are an official Partner to the Australian Government's Stay Smart Online initiative.
